

OTTAWA. — An irrigated pasture experiment at the Leebridge Experimental Farm, Canada Department of Agriculture, emphasizes the importance of two operations involved in spring management. One of these operations is the application of fertilizer, and the other is the handling of the spring pasture surplus.

OTTAWA.—An irrigated pasture experiment at the Lebelville Experimental Farm, Canada Department of Agriculture, emphasizes the importance of two operations involved in spring management. One of these operations is the application of fertilizer, and the other is the handling of the spring pasture surplus.

In this experiment, four pasture mixtures are being compared under two levels of fertility. All the pastures receive 10 tons of manure per acre every other year, and in addition, half of them receive commercial fertilizer at the rate of one hundred pounds of ammonium phosphate, 11-48-0, in early spring plus one hundred pounds of ammonium nitrate, 35.5-0-0, in July.

Increased production

In 1955, the average effect of the commercial fertilizer on alfalfa herbage production was 22.5 percent between June 1 and July 9. By mid-July production of the fertilized pastures had fallen to the level of the unfertilized pastures. The second application of fertilizer, on July 14, again increased production and held it at a higher level than that of the unfertilized pastures until August 1, when it again fell to the level of the unfertilized pastures. This treatment might now be the most economical one to use, but it does indicate the importance of fertilizers in pasture management. The following being stated more critically.

Handling of the spring pasture surplus can be very efficient under rotational grazing.

Two pastures are given access to a small area of pasture for a few days, before being moved on to fresh pasture. The grazed area can be used for a second crop of forage, which might include mowing, harrowing and fertilizing then irrigated and left to recover. A minimum of four rotations should be possible, resulting in good growth of the pasture.

On ocean liner
MONTREAL—Canadian housewives who regard the daily preparation of three square meals was something less than enthusiastic might derive some solace from the fact that when the new Cunard liner Carinthia enters service next month, housekeeping aboard her will entail the serving of 4,000 meals each day.

Third built of four new 22,000-ton passenger vessels designed for the Cunard Line's Canadian service, the Carinthia sails from Liverpool June 27 on her maiden voyage to Canada. She is scheduled to

When one considers that 4,000 tons that will be served daily aboard the Carinthia, it is not surprising that cutlery, chinaware and kitchenware will be the most numerous items in the big ship's vast store of equipment.

Trangl from items such as 24-inch meat dishes to dainty finger bowls, ice tongs and wine stems, the chains, cutlery and kitchenware in the Carinthia will number some 14,000 pieces. Glassware in the big liner will total 8,000 pieces while her stock of chinaware and earthenware will comprise 10,000

Low blood pressure is usually a symptom rather than an individual ailment. It may indicate some specific disease requiring medical attention. When the basic cause is cleared up, low blood pressure should also become normal.

exists. At Lethbridge, when an attempt was made to handle the surplus by forcing sheep to eat a high proportion of the feed was wasted. A few weeks after grain started, growth was rank and stemmy, and the sheep became very selective in their grazing. The grass they refused to eat amounted to 12.2 percent of the

total yield for the year on the fertilized pastures, and 20.4 percent on the unfertilized. Such a loss can be avoided by harvesting once or two of the rotation fields as hay or silage, before the first grazing in spring.

An alternative is to begin grazing when grass in the first field is four to six inches high, providing the ground is firm. Often it will be necessary to use a combination

Commercial egg production from a broiler strain of pullets is not likely to be profitable unless a market is available at a broiler hatchery for a large proportion of the eggs. Broiler strains have been developed to produce rapid growing chicks of desirable conformation but, as a rule, they do not produce as many eggs as dual-purpose or egg strains. In addition, adult birds of broiler strain

usually are large in size. These factors tend to increase the cost of egg production.

To gain information on the egg production possibilities of representatives of dual-purpose and broiler strains, egg records were compared at the Experiment Station, Canada Department of Agriculture, Fredericton, N.B., between a well known broiler strain of New Hampshire and a dual-purpose strain of Barred Rock. On a survivor basis, the Barred

Ped conversion figures are not available on these birds but it is known that the large broiler strain, New Hampshire require more feed for maintenance than smaller birds. Tests in the United States show that it requires, on the average, over eight pounds of feed for every pound of egg from broiler strains. Dual-purpose and egg strains should produce a dozen eggs on six pounds or less of feed.

Therefore, in order for pullets from a good broiler strain to be as profitable in the laying pens as those from a good egg production strain, a substantial premium would have to be paid for hatchlings from the broiler strain. The higher market value of the broiler strain carcass at the end of the laying period, would only partly cover the higher cost of rearing and maintenance.

REGINA.—The annual arrival of birds is pretty well on schedule in Saskatchewan with about 70 species observed since the beginning of March.

Fred Lahrmann, assistant at the Staatliche Naturhistorisches Museum of Natural History, said that of the species observed up to May 10, 16 were recorded on May 26, 26 in April and 15 to May 10.

Bird observations were made by director Fred G. Band, assistant director Dr. Robert W. Nero, Mr. Lahrmann, and four members of the Regina Natural History Society: Dr. G. W. B. Fraser, Mr. J. H. B. Fraser, Mr. Reicher, E. Fox and G. Ledingham.

Mr. Lahrmann said whooping cranes, swans and geese appear to be staying in the south central part of the province longer than usual, probably because of the unusually warm weather conditions.

Swans and geese were observed on flooded stubble fields near No. 1 highway, approximately 20 miles south of Regina, while song birds were observed on the irrigated farming lands in the Qu'Appelle valley.

Mr. Lehrman said any bird watchers desiring to take part in field parties are requested to contact Mr. Brazier at either LA 2-1081 (office) or LA 2-3303 (home).

Sunburn and sunstroke can spoil the nicest vacation. For the city person who starts out on the first day at the lake to take on the coast of tan, there are hazards. The method entails hours of exposure to direct sunshine. It is much safer to start to acquire a coat of tan in early summer by lying in the sun, at an open window if necessary, for about 15 minutes a day. Increase this to 20 minutes daily after the first week and so on, until there is a noticeable tint on the exposed skin which will help to provide protection against burning. A hat or other headcovering should always be worn during the hotter parts of the day.

Two neurologists reported to the American Academy of Neurology recently that women with epilepsy can have children with safety. The report of Dr. Cary G. Sulz and Dr. Walter O. Klingman, both of Charlottesville, W.Va., to the

Centre

ner Pauline Rochon first saw the valley in Quebec's Valley of the Saint Lawrence as an ideal location in which to plan to life.

When summer vacationer Pauline Rochon first saw the resort village of St. Adele, in Quebec's Valley of the Saint, its natural beauty struck her as an ideal location in which to bring a long-dormant plan to life.

Now, ten years later, St. Adèle's Art Centre summer school has survived its shoe-string start and become a flourishing mecca for holidaymakers who want to mix culture with their fun in the sun. From her pink-roofed handicraft shop, "La Pelerine," Mies Kochon directs a thriving school with students from Canada and the U.S. Under the tutelage of top Canadian artists, dancers and teachers, members of the ballet class pirouette on hotel lawn and budding painters work against a background of sky and scenery. There is no homework, no exams, and after classes ranging from French to fashions, dancing to leathercraft, students relax on the sun-drenched beaches of nearby Lac Roué.

Language classes find a wide following among vacationers. Informality is the keynote of all classes, whether indoors or outdoors, with the emphasis on individual instruction. Here Professor Jacques Beauchamp of Montreal's St. Henri High School, (centre) conducts French class with Dr. and Mrs. Rogers of Vancouver, Canada.

Claude Vermette, talented Canadian ceramist, is one of the top ranks of French Canadian classical and baroque. Funds for the venture, which began ten years ago, are derived mainly from course fees although the school helps meet operating deficits. School year closes with

Forty-seven lazy men and four women recently got up enough energy to compete in a contest here for the laziest person in the neighborhood.

Many directors Harold Powell, was awarded the first prize, a easy chair.

He shares in bed, and he uses his shoolies so he won't have to get up. When people are over him he judges, it is foolish to stand up straight, as he tends to throwback.

Harold Powell won stony nods of approval from the other contestants as he asserted, "The two great sins of the present day are work worry."

Another Harold Watson said the purpose of his dreams would be to have a car, a radio, a typewriter, electric shaver, radio, portable lighter, air-conditioning built-in heater.

Cut-out masks, part of the members, are pasted up student. Twice weekly air concerts are given to new students as well as the Centre's numerous actors.

Dr. Suter said seizures in pregnant women could result in death or serious after-effects to both unborn child and mother. But, he added, under careful medical supervision most of the women can give normal births.

Dr. Suter said contrary to popular belief heredity is not a major factor in epilepsy although the genetics factor does seem to be present in some cases.

Against background of boating holidayers, ballet class members go through their paces under the direction of Seda Zare, Prima Ballerina with the Boris Knisess Ballet of Europe. (Lower photo) From quiet perch on river bank, art class students translate to canvas. Class is conducted by Agnes Lefort, who has been identified with the St. Adele movement almost from its beginning.

art project for junior art class on Centre's window by young during the summer season, open-cultural films shown to attract to bring in needed funds for the.

Well-known Canadian ceramist Claude Vermette conducts children's class in his St. Adele studio. Classes are held outdoor whenever possible, with ballerinas pirouetting on the front lawn of a hotel, concerts held in mountain side ski shelters. Since its beginning, St. Adele centre has attracted continent-wide interest and rated kudos of top artists and educators.

A black and white photograph of a small, single-story wooden building, likely a garage or workshop, with a porch and a person standing on it. The building has a gabled roof and a chimney. The porch has a railing, and a person is standing on it. The building appears to be made of wood siding.

Headquarters for the St. Adele Art Centre is an unimposing little cottage in the resort village. Ten different courses are offered to adults, four for children, including instrumental music, singing, tapestry weaving, painting and classical dancing. In spite of wide variety of courses, students still have plenty of opportunity to enjoy resort's holidaying facilities.

Mrs. Jo Cardinal, member of weaving class conducted by Mariette Rousseau-Vermette, work at loom in her St. Adèle home. Average course costs holidayers from \$6 to \$8 per week; instruction is serious but sessions informal and gay. Students may sign up for as many or as few classes as they wish during July-August school term.

RED PROPAGANDA FLOODS CANADA—Communist newspaper and Soviet propaganda in their own language is being spread amongst Polish immigrants in Canada. "Ratna Rosy" initiative are constantly reaching people in Canada of Polish descent. Even phone calls are made by Red agents. The Polish got, Halina Czarasi, holds one of the papers.

NEW PETROCHEMICAL PLANT—Engineer's sketch showing over-all view of Platformer and Udon facilities to be built at Canadian Oil's Sarnia refinery. Part of the extensive expansion program at the refinery, these new facilities will considerably increase Canadian Oil's production of petrochemical raw materials.

MRS. AMERICA OF 1957—Mrs. Chae Minton 31, of Portland, Oregon, is shown with her regal robes, crown and scepter after being crowned "Mrs. America of 1957" over 43 other contestants at the Pashody Auditorium in Daytona Beach. Mrs. Minton, representing the state of Oregon, she has three children.

LISTEN TO THE STARS—That's what Harvard's astronomers plan to do with this 80-foot diameter radio telescope at Green Bank, Mass. Largest in the United States, the "ear" is designed to pick up electrical impulses from stars as far as one hundred million light years into space. (A light year is equivalent to the distance travelled by a beam of light in one year at the rate of 186,000 miles per second.)

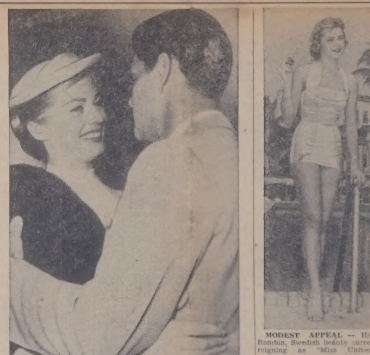

THEIR JOB: NO MORE HEROES—Every day is Memorial Day for the United States Joint Chiefs of Staff. To make America so strong defensively, so mighty in potential retaliatory power, that no aggressor will dare open the doors of all-out war is their job in the tense-ordered world of the Atomic Age. From left, in the Staff Conference Room at the Pentagon: Adm. Arleigh A. Burke, chief of naval operations; Gen. Nathan F. Twining, chief of staff, U.S.A.F.; Adm. Arthur W. Radford, chairman; Gen. Maxwell D. Taylor, chief of staff, U.S. Army; Gen. Randolph M. McCall, Paic, commandant, Marine Corps.

A LINE SNAPPER—Alvin Sherman 24, of Brooklyn, N.Y., poses a record-breaking catch of blue marlin at dockside in San Juan, Puerto Rico. The weight, 1,000 pounds, must be confirmed by the International Game Fish Commission before it's official. Largest catch of blue marlin recorded previously was a 742-pounder, caught off Miami in the Bahamas, in 1949.

FREED FROM RED PRISON CAMPS—Mrs. Asta Rasmus, left, is embraced by her sister, Gerda Peterson on arrival in Copenhagen, Denmark, after 10 years in Russian prison camps. Arrived with her husband, a Lithuanian, when the Russians took over the Baltic country, Mrs. Rasmus was released following a request by the Danish premier. Her husband died in Siberia.

A WARM EMBRACE IN ROME—Swedish actress Asta Rasmus is welcomed by her sister, Gerda, sister Asta Rasmus, upon arrival by plane in Rome. Asta fled from New York for her brother, fleeing to Rome which is scheduled to take place soon in Florence, Italy, where he is working on a picture.

MODERN AFFAIR—Hilma Rindin, Swedish beauty currently reigning as "Miss Universe", models a conservative halter-type bathing suit on a beach at Miami Beach, Fla. Strips of the low-cut top can be tied across the neck for modesty. Such a style is in vogue in many hot, low-cut, and typically trend in suits this season.

ONE THAT DIDN'T GET AWAY—Big thrill for a little boy is his big fish. Six inches of perch represents a whopping catch for David Ford, 4, of Midway Park, Ill.

ALLOWED TO STAY IN U.S.—Mrs. Christa Holder, a German bride, who came to the United States New Year's Day only to find her husband had died in Berlin, N.J., following an industrial accident, is shown with infant daughter, Evelyn, after receiving news that President Eisenhower had signed a bill allowing her to stay in the country.

HEAVY ARTILLERY—Big gun in the war against cancer is this all-American home electric refrigerator, recently unveiled at Columbia's Barnard University. Model sits in Manhattan, revealing shop which positions a patient in front of gamma beams. Gamma rays and population of high-energy X-rays for treatment of deep seated cancer is controlled from outside the household view. The \$100 unit machine was built by Stanford scientists under grants from the American Cancer Society and the United States Public Health Service.

BEZUYING—That's the effort two 7-year-olds at this picture show are making. It's a madcap superlatively view of war and communism. It's a madcap superlatively view of war and communism. It's a madcap superlatively view of war and communism. It's a madcap superlatively view of war and communism.

ENJOYS HOME LIFE—Berk's Marianne, retired world's heavyweight boxing champion, enjoys the life of being at home with his wife and daughter, Mary Ann, three, who is seen giving a ride on a swing in the back yard of their Brooklyn, Mass., home.

Canned beef industry

The most significant feature of the beef cattle industry in Canada is the remarkable increase in the consumption of it. In 1965, Canadians ate 12 pounds of beef per capita. This is approximately 25 months or 27.5 percent higher than the per capita consumption for 1952, said R. R. Bennett, Chief Livestock Marketing, Canada Department of Agriculture. Bennett said that the Canadian Cattle Raisers' Association held its 25th annual convention in Ottawa.

Last year the industry's total output of cattle averaged 23.72 head per acre and the beef cattle output for the whole year for slaughter or for feeding was about two percent of the cattle market value. The total value of the beef cattle market was about \$1.5 billion. The total value of the beef cattle market was about \$1.5 billion. The total value of the beef cattle market was about \$1.5 billion.

The Canadian consumer is buying more and more of the top grade of beef as indicated by the increase in the average weight of the beef over the past few years. In 1965, the average weight of the top grade of beef was 12.5 pounds, compared with 12.0 pounds in 1964. The average weight of the top grade of beef was 12.5 pounds, compared with 12.0 pounds in 1964.

The increase in demand for Red and Blue carcasses has created a year round market for these grades. In 1965, the weekly average of Red and Blue carcasses was about 11,000 carcasses. The weekly average of Red and Blue carcasses was about 11,000 carcasses. The weekly average of Red and Blue carcasses was about 11,000 carcasses.

This change in marketing demand has resulted in a more efficient use of pasture lands. An example of this is the fact that the pasture lands in the United States are being used more efficiently. An example of this is the fact that the pasture lands in the United States are being used more efficiently.

Last year Canadian cattle producers had a good job of shipping their cattle into the United States. The cattle were shipped in large numbers. The cattle were shipped in large numbers. The cattle were shipped in large numbers.

10:00	CBC News, Weather.
10:15	Fred Hill.
10:30	Business and Labor Review.

SUBSIDIES

Supplementary times taken by the Commonwealth by Finance Minister Harris affirming insight into extent to which subsidies are being considered in careful economic life. In fact, several percent of official figures makes clear that subsidy is one form or another, it being almost everywhere considered, by almost everyone.

Subsidy times noted with supplementary include a \$12 deficit. This is in addition to \$17 million went in main estimates some weeks ago. \$60 million is expected to be paid in Old Age Security Fund, \$45 million is earmarked to meet demand on various East Coast ferry services operated by government. \$10 million is allocated to subsidize low-yielding gold mines. Agricultural subsidies are the average of the various states of marketing Australia's exportable surplus, which has been in effect for more than 50 years. Greater subsidies are being paid for each harvest in each of the exporting states on the basis of declining samples from the various districts, and the subsidies are being paid the same price as for the lower quality wheat, variable with quite different marketing conditions. The subsidies are common pool, although premiums usually offered for hard white wheat kept most of three out of the exportable surplus.

For some years the f.a.o. agency has been under criticism, agricultural experts maintaining that the subsidies are not in the way of greater wheat stand in the way of greater improvement and tending towards deterioration in the average quality of the wheat. The subsidies to be continued, in new levels

te up to a tidy figure.

Local and District

Mr. and Mrs. W. H. Gaetz returned from a vacation on Thursday last.

Mr. and Mrs. H. F. Crowleier left last Saturday morning for Calgary, en route to Vancouver, on a visit to relatives.

The cultural Council who contemplate making recommendations which will enable Alberta to take advantage of the higher prices offered for high protein wheals.

FOREST FIRE SITUATION

The extreme fire situation throughout Alberta has been relieved by rain which has fallen in the forested areas during the past week. Forest Service personnel and fire

The Delta Cemetery Committee, which met on Saturday last at the Legion Hall, was most successful, and was well patronized by those from town and country.

The weather was cool and showery over the week end. On Monday, June 17, at 7:30 a. m. after a threatening morning, leading skies finally broke with a thunder and hail storm, followed by a heavy rain, which came downpour that lasted for a half hour or more. The weather now remains dry and sunny, with the temperature in the 70's, at this writing.

.....

Domination Day, July 1st, falls on Monday, June 18th.
